

Q'n Apps #P52

Q: Can I use My Favorite Editor by default?

My Favorite Editor

Many features of Presto refer to standard ASCII files for support and parameters, such as PinList, CaeLink, AutoTest, and other log files. You can specify which editor is used to open these file from within Presto by a command in the Special Scripts file, SpScript.txt, located in C:\Presto. The command line is:

```
; MyFavoriteEditor uedit32.exe ; Full path to editor recommended. Replace path spaces with  
*.
```

To enable the feature, remove the leading semi-colon (;).

Next, define the full path for the desired executable. Be sure to replace any spaces in the path with * in your command line. If you are setting this up on a computer received from HiLevel, the powerful Ultra-Edit file editor will have already been installed. The default path for UltraEdit is:

```
C:\Program Files\IDM Computer Solutions\UltraEdit-32\udeit32.exe
```

Your modified command line for the SpScript file needs to look like this:

```
MyFavoriteEditor C:\Program*Files\IDM*Computer*Solutions\UltraEdit-32\udeit32.exe
```

Save the SpScript.txt file and restart Presto for the change to take effect. If you do not define an editor, or if the path is incorrect, Presto gives an error message and defaults to Notepad.
